## 💼 PROFESSIONAL EXPERIENCE

**Web Developer,** *TDTechnologies*                                       Jun 2018 – Dec 2021
TDtech was a startup with the intention of providing software solutions to people but when I    Sunyani, Ghana
was introduced as one of their first set of employees just after my final year of project defense,
I was tasked to create a web app with the Django framework though I had no background in it.
My background was in PHP. After brainstorming with my partner, we decided to build a web
app that enhances ordering and delivering food online. After that, I was introduced to building
an API using the Django REST framework. In collaboration with my colleagues, we built an API
for the food delivery app. I was also involved in building the mobile application using flutter.
Ever since the deployment and use of the app in 2019, I had the task of maintaining and
improving the functionalities of the app.
